

# Climate and Health Strategy

## Performance Framework

EB43 pre-read document – [Supplemental annex](#)

## Introduction and purpose of this document

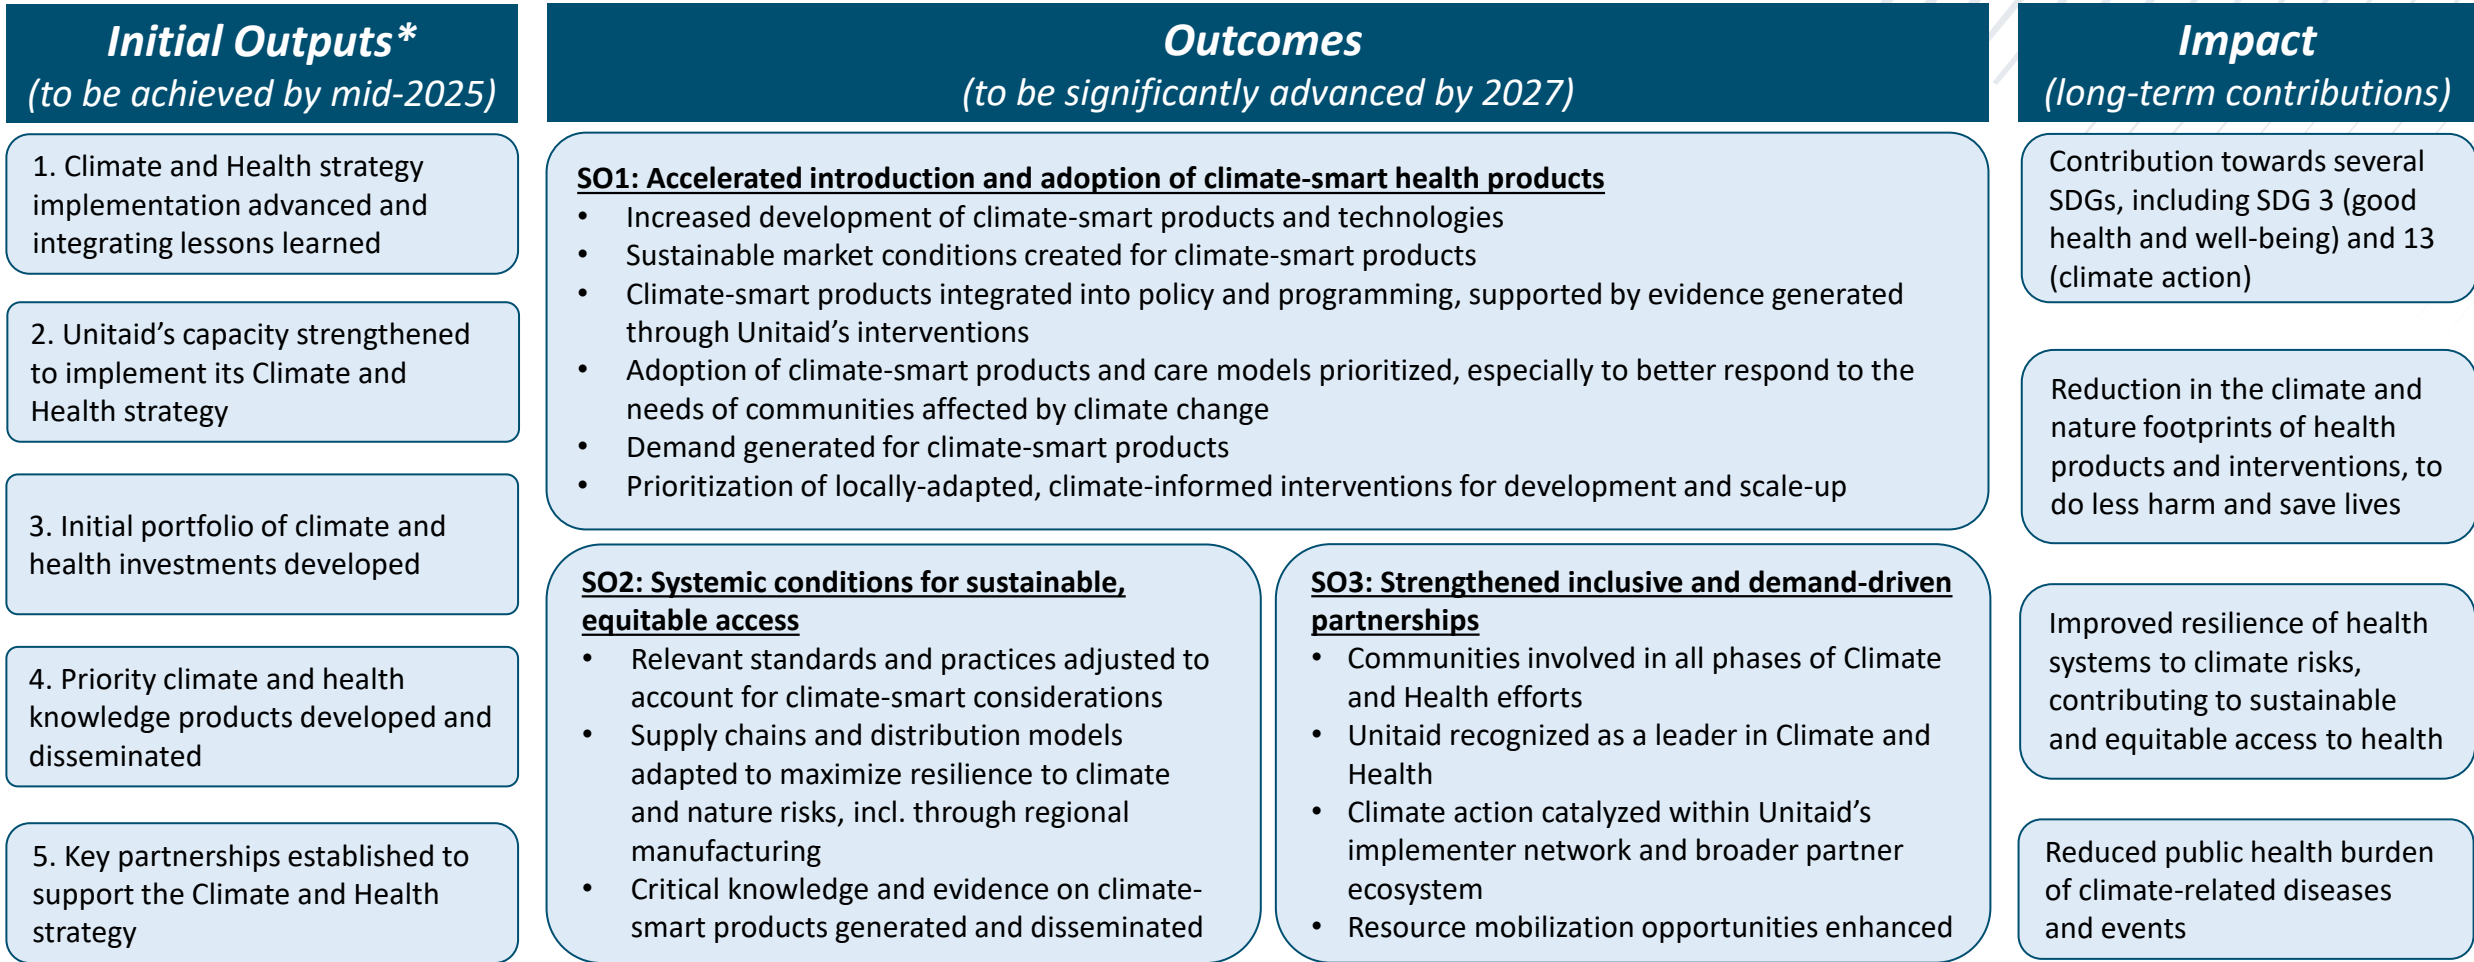

**This document is a supplemental annex to the main document submitted to the Executive Board on “Climate and Health.” It presents the performance framework for the Climate and Health strategy.**

The performance framework defines the Secretariat’s ambitions for its Climate and Health work and outlines the strategy’s pathway to impact. It also enables the Secretariat to track progress of the strategy’s implementation.

The performance framework outlines:

- The **initial outputs to be delivered by mid-2025** (with further outputs to be defined as progress of the strategy advances).
- These outputs will in turn contribute to significantly **advancing a set of outcomes by 2027** under each of the Strategic Objectives: 1) accelerating the introduction and adoption of climate-smart products, 2) creating systemic conditions for sustainable, equitable access, and 3) strengthening inclusive and demand-driven partnerships.
- Ultimately **contributing to long-term impact** in the Climate and Health space.
- Finally, the cross-cutting pillars of **“Do our part”** (reducing greenhouse gas emissions of the Secretariat and Unitaid’s portfolio of investments) and **developing and implementing a learning agenda** will support and strengthen the Climate and Health strategy’s implementation.

# Performance Framework for the Climate and Health Strategy

❖ *“Do our part”*: Reduced greenhouse gas emissions of Unitaid’s Secretariat and portfolio of investments, in line with UNFCCC’s Paris Agreement and net zero goals (50% reduction by 2030)

❖ *Climate and health learning agenda developed and implemented, incl. disseminating learning widely externally and integrating into existing and future Unitaid work*

\* Outputs to be revised and/or additional outputs identified following mid-2025, as Climate and Health efforts advance and to respond to emerging priorities and a fast-shifting Climate and Health landscape.

# Reporting on the implementation of the Climate and Health strategy

- Progress reporting of the implementation of the Climate and Health strategy to the Executive Board will occur annually, in June each year, at the same time as the broader reporting on the implementation of Unitaid's 2023-2027 Strategy.
- An important element will focus on presenting learning in the key areas identified in the Climate and Health strategy to enable the Secretariat to adjust its efforts for maximum impact and to enable the work of other partners.
- Additionally, there are important linkages between the Climate and Health work and the Strategic Objective Key Performance Indicators (e.g., climate-smart products will be captured under KPI 1.2 on portfolio health). Where relevant, these contributions and connections will be highlighted in the annual KPI reporting to the Executive Board.
- Climate and Health will also be integrated as a specific area of focus in the mid-term and end of term review of the Unitaid Strategy.
